Google Sheets Auto Email Sender

This project allows you to automatically send reminder emails to recipients listed in a Google Sheet.

Emails are triggered based on due dates and are marked as SENT once delivered.

Features:

- Read data from a sheet named 'ReminderList'

- Send emails on the due date

- Update the status column to avoid resending

Sheet Format (ReminderList):

-------------------------------------------------

| Name    | Email          | Due Date | Status |

-------------------------------------------------

| Alice   | alice@email.com | 2025-06-22 |        |

| Bob     | bob@email.com   | 2025-06-23 |        |

How to Use:

1. Open Google Sheets and go to Extensions > Apps Script

2. Copy-paste the code from `auto_email_sender_gsheet.js`

3. Set up a time-based trigger to run `sendReminderEmails` daily

4. Customize email content as needed

Done! Your email reminders will send automatically each day.
